

Televisit™ is a complete telemedicine platform that offers a full array of medical devices. *Quick* set up and *ease of use* make it ideal for medical professionals that provide services to remote populations. Regardless of **when** and **where**, Televisit is your clinic-in-a-box.

### Flexible and Portable - Telemedicine on the go

Televisit takes advantage of the latest computer and connectivity technology to give healthcare professionals and patients a wide range of options for delivering and receiving medical consultations. Doctors can monitor patients remotely in their homes, school, work places and the field. The integral medical record system and scheduling tools enhance productivity and make Televisit the only tool you need to start a telemedicine practice.

Equip your Televisit 930 with a broad spectrum of medical devices that allows the provider to tailor the product to the intended patient population. Chose one or more connectivity options depending on the environment that the system will be used – 3G /4G, wireless, broadband and satellite.

### The Plug-and-Play Telemedicine Network

Remove the technical complexity and capital costs of building a telemedicine network by using the Televisit Managed Network. The Televisit 930 automatically and securely connects to our data centers allowing the medical service provider to create virtual clinics, assign medical resources, and store all medical records. Professionals access an intuitive user interface that allows them to control the aspects of their telemedicine practice. Features

- User and profile management
- Appointment scheduling
- Reporting
- Patient records
- Medical billing management

Televisit is an ideal solution for any industry that requires remote medical services.

Televisit™ in combination with our light weight, and rugged portable case brings the doctor's office to where you need it, when you need it.
